

Spider

Spiders are found deep into a coalmine.

The spiders in the mine are orb web weavers.

Millipede

Millipedes are found on timbers deep in a mine.

The millipedes at the National Coal Mining Museum for England are called *Bianiulus guttulatus*.

Name	Spider	Name	Millipede
Habitat	Cold places	Habitat	Millipedes live in the surface debris on soil. They are also found in the twilight zones of caves.
Diet	Spiders eat flies	Diet	Plants and decaying materials. In the mine they eat wood.
Special features & creepy facts	Because of the darkness underground these spiders have very small eyes. The spider hangs below its web waiting for prey to blunder into its trap.	Special features & creepy facts	Some species may have up to 130 pairs of legs (that's 260 legs!)
